Lymphadenectomy in urological malignancies
ESU Course 20

Location: Grey Area, Room G105
Chair: To be confirmed

Learning objectives of this session
Mostly, in case of tumour surgery, a loco-regional lymph node (LND) dissection is also indicated. With the introduction of minimal invasive surgery the LND often seems to have lost the attention of the surgeons and has been practiced in less cases and/or less extensively. Throughout our presentation we will corroborate the indications when a LND has to be performed, the templates, the techniques using different approaches and the oncological as well as functional outcomes.

After attending this course, participants should be able to:
• Know the indication when to perform LND during surgery for urological malignancies.
• Apply the most modern imaging concepts for the preoperative lymph node staging.
• Have solid knowledge about the templates that have to be removed.
• Be informed concerning the oncological and functional results of lymph node dissection as well as complications.

Renal cancer
U. Capitanio, Milan (IT)

Urothelial cancer
To be confirmed

Prostate cancer
To be confirmed

Testicular cancer
To be confirmed

Penile cancer
U. Capitanio, Milan (IT)
