Focal therapy in prostate cancer
ESU Course 27

Location: Grey Area, Room G105
Chair: E. Barret, Paris (FR)

Voting will be available via the EAU20 App or via www.qna.at/eau

Learning objectives of this session
Focal treatment (FT) is about eradicating the cancer lesion within the prostate while preserving genitourinary function. This interactive course offers delegates
• understanding of the rationale for focal treatment and patient selection criteria.
• update on principles, outcome and side effects of focal technologies.
• a thorough discussion of biopsy strategies and imaging in diagnostic work-up and follow-up
• information about existing registries.
As men with prostate cancer are getting younger the side effects of whole gland treatment are getting more important. With several new technologies available a significant development of focal treatment is expected in the coming years.

Definition, rationale and role in the changing landscape of localised prostate cancer
A. Govorov, Moscow (RU)

Imaging and biopsy for patient selection
M. Valerio, Lausanne (CH)

How to select the energy source?
E. Barret, Paris (FR)

The post-treatment monitoring
A. Govorov, Moscow (RU)

The outcomes and the ongoing trials
M. Valerio, Lausanne (CH)

Clinical cases: Real life cases, stories of success and failure
E. Barret, Paris (FR)
