## Advanced prostate cancer: Which multimodality treatment?

**Poster Session 50**

**Sunday 19 July**

**14:00 - 15:30**

**Location:** Yellow Area, Room Forum

**Chairs:**
- A. Martini, Milan (IT)
- To be confirmed
- B. Tombal, Brussels (BE)

Poster viewing of 20 minutes. Presentations will take place on stage. Standard presentations are 2 minutes in length, followed by 2 minutes for discussion. Extended presentations (*) are 3 minutes in length, followed by 3 minutes for discussion.

### 681

*Evaluation of neoadjuvant chemohormonal therapy before radical prostatectomy in patients with high-risk and locally advanced prostate cancer: A prospective study of goserelin and bicalutamide with or without docetaxel*

To be confirmed

### 682

*Short-term outcomes of neoadjuvant chemohormonal therapy followed by radical prostatectomy for Chinese patients with regional lymph node metastatic prostate cancer*

To be confirmed

### 683

*Impact of cribriform volume in Gleason pattern 4 on biochemical recurrence in prostate cancer patients who underwent robot-assisted radical prostatectomy*

To be confirmed

### 684

*External validation of genomic classifier based risk-stratification tool to identify candidates for adjuvant radiation therapy in patients with prostate cancer*

To be confirmed

### 685

*Impact of adjuvant radiotherapy in patients with high burden lymph node metastases after radical prostatectomy*

To be confirmed

### 686

*Salvage radiotherapy versus observation for biochemical recurrence following radical prostatectomy for prostate cancer: A matched pair analysis*

To be confirmed

### 687

*Comparison of early salvage and adjuvant radiotherapy for non-organ-confined prostate cancer after radical prostatectomy*

To be confirmed

### 688

*Adjuvant versus salvage radiotherapy following radical prostatectomy: Meta-analysis of the effect of comparator salvage approach on study conclusions*

By: Wallis C.J.D.¹, Klaassen Z.², Luckenbaugh A.¹, Laviana A.¹, Bhindi B.³

| 689 | Timing of radiation after radical prostatectomy for men with prostate cancer may affect clinical outcomes | To be confirmed |
| 690 | Assessing the optimal timing of salvage radiation therapy administration after radical prostatectomy: A stage-specific analysis from a large multi-institutional series | To be confirmed |
| 691 | External validity of the Stephenson nomogram predicting the outcomes of prostate cancer patients treated salvage radiotherapy after radical prostatectomy: The importance of genomic data | To be confirmed |
| 692 | Assessing the impact of salvage radiation therapy field after radical prostatectomy: A long-term analysis from a large multi-institutional series | To be confirmed |
| 693 | Does concomitant anti-androgen therapy improve outcomes in patients with recurrent prostate cancer undergoing early salvage radiation therapy | To be confirmed |
| * 694 | Identifying patients that may benefit from addition of bicalutamide to salvage radiation therapy in the setting of biochemical failure after radical prostatectomy | To be confirmed |
