Poster viewing of 20 minutes. Presentations will take place on stage. Standard presentations are 2 minutes in length, followed by 2 minutes for discussion.

637 Inhibition of human prostate smooth muscle contraction by the integrin α2β1-selective inhibitor BTT3033 and the integrin-linked kinase inhibitor Cpd22
To be confirmed

638 The STK-16 inhibitor STK16-IN-1 inhibits non-neurogenic/non-adrenergic smooth muscle contractions in the human prostate and the human male detrusor
To be confirmed

639 Metabolic syndrome and condition of the bladder wall in the experiment
To be confirmed

640 Increased stromal components and prostatic fibrosis via altering the CYP19/Estrogen/GPER signaling in the early progression of BPH tissues of men ≤ 50 years old
To be confirmed

641 Methylated CpG dinucleotides in 5-α reductase 2 gene might explain the finasteride-resistance in BPE patients
To be confirmed

642 Inhibition of human prostate smooth muscle contraction by thalidomide: A novel remedy in LUTS?
