ESU/ERUS Hands-on Training Course in Robotic Surgery – Introduction

Learning objectives of this session
The European School of Urology (ESU) and the EAU Robotic Urology Section (ERUS) offer an intensive hands-on training course with the opportunity to get the ERUS basic skills certificate.
We will provide training using simulators. The main aims of this 90 minutes course are: improving the participants’ control-skills and hand-eye-coordination, as well as an objective benchmarking of console performance and an introduction into standardized surgical steps in robot-assisted procedures.
Therefore, each course is limited to the small number of 3 participants, to facilitate an optimal training setting with a maximum of only 2 participants per faculty.
