Transgender healthcare: A primer for the urologist
Thematic Session 19

Monday 19 March
10:30 - 12:00

Location: Blue Area, Room 5 (Level 0)
Chairs: M. Albersen, Leuven (BE)
G. Garaffa, London (GB)

Aims and objectives of this session
This session will take you through a typical journey of a transgender patient. As urologists, we are the technicians and rely heavily on our psychiatrists to make the correct diagnosis before referral. Hormonal therapy is used early and it's irreversible changes are often necessary, not only to complete the real life test, but to help decide what type of surgery is best suited to the patient. The surgeries are complex, often with complications which will be discussed as well as the end goal of penile prosthesis implantation. Finally, do we have a better option now with penile transplantation on the horizon.

10:30 - 10:45
Psychological evaluation and outcomes for transgenders: What the urologists needs to know
T. Steensma, Amsterdam (NL)

10:45 - 11:00
Gender-affirming endocrine treatment
A.D. Fisher, Florence (IT)

11:00 - 11:15
Vaginoplasty techniques in the Male to Female (MtF) patient
T. Rashid, London (GB)

11:15 - 11:30
Managing the urethra of the Female to Male (FtM) patient
R. Djinovic, Belgrade (RS)

11:30 - 11:45
Penile implants in FtM patients
G. Garaffa, London (GB)

11:45 - 12:00
Hot topic Getting ready for penile transplantation: A novel option?
N. Sopko, Baltimore (US)
