Combating UTI – Shifts of paradigm

Aims and objectives of this session
Due to the increasing prevalence of antimicrobial resistance, new treatment options are urgently required in uncomplicated UTI. Initial data suggest the use of symptomatic treatment only might be an alternative in selected patients. The use of phytotherapy to overcome the need for antibiotic treatment AND to provide symptomatic relieve might be a promising option for the future. Clinical studies are underway to generate the evidence for this approach. The speakers will integrate recent findings from bench to bedside and propose new strategies for the diagnosis, assessment and therapy of uUTI.

18:00 - 18:05
Introduction
K. Naber, Straubing (DE)

18:05 - 18:30
Symptom-scoring, the host response and the identification of patients suitable for alternative treatments in UTI
B. Wullt, Lund (SE)

18:30 - 18:55
The importance of proper diagnosis of UTI - ACSS as new tool
J. Alidjanov, Tashkent (UZ)

18:55 - 19:20
Non-antibiotic treatment approach for UTI – Quo vadis?
F.M.E. Wagenlehner, Giessen (DE)

19:20 - 19:30
Discussion, questions and answers
